linkedin.com/in/hamsini-sankaran

Data/ML Scientist with expertise in data engineering, machine learning, NLP, and visualization, totaling 6 years of work experience.

Skills

Languages	Python, R, Scala, Golang
Web Dev/Frameworks	TensorFlow, Keras, Django, Flask, React JS, HTML, CSS
Data Analysis	Pandas, NumPy, librosa, Audio Feature analysis, Scipy, Excel
Big Data	Kafka, Akka stream, Elastic Search, Spark, Hadoop, MapReduce, ETL
Database	Postgres, Redis, Mongo, Neo4j, SQL
Visualization	Matplotlib, Seaborn, Plotly, D3.js, Altair,Tableau, Grafana, Splunk, Amcharts, ggplot(R)
Cloud	AWS, GCP, Databricks
Statistics/ML	Scikit-Learn, Hypothesis Testing, Linear Regression, Logistic Regression, Decision Trees, Random Forest, Xgboost, KNN, SVM, DNN, CNN, GRU RNN, LSTM, Transfer Learning, NLP, PCA, SSD mobilenet, ensemble, MLP, GBT, Naive Bayes, cross-validation, time-series analysis, text classification
OS/Scripting	Linux, Bash
Containers/Orchestration	Docker, Kubernetes

Education

Master of Information and Data Science, GPA - 4/4 (Expected Graduation: Fall 2024), *University of California, Berkeley*
Relevant Courses: Natural Language Processing (NLP), Machine Learning, Data Engineering, Statistics, Data Visualization
Master of Science, Computer Engineering, GPA - 3.42/4, *San Jose State University*
Bachelor of Engineering, Electrical and Electronics, GPA - 3.90/4,*Anna University*

Data Science Projects

Metastatic Cancer Diagnosis Prediction WIDS Datathon, 2024 **Jan 2024 – Ongoing**

- Collaborating in an international datathon utilizing machine learning for healthcare challenges.
- Analyzing oncology data and developing a model to predict metastatic cancer diagnosis within 90 days of screening.
- Implementing data preprocessing and feature selection techniques to enhance model accuracy and performance.

Real-Time Prediction of Flight Departure Delays UC Berkeley, CA **Oct 2023 – Dec 2023**

- Led the development of a predictive analytics pipeline, achieving a 52.26% F2 score in forecasting flight delays using historical data.
- Managed preprocessing of a dataset with 2+ million records; executed data cleaning, and spearheaded the extraction of impactful features.
- Developed feature engineering with time and frequency metrics to boost model F2-score.
- Executed hyperparameter tuning via grid search, refining model parameters to bolster precision and recall in predicting flight delays.
- Implemented blocked-time series splits and cross-fold validation in data handling to ensure time-series integrity and prevent leakage.
- Developed machine learning models, such as Logistic Regression, Decision Trees, Naive Bayes, MLP, GRU RNN, and ensemble methods.
- Led data integration efforts to enrich the predictive model with real-time data, enabling more effective trend analysis and decision-making.
- Advocated predictive modeling for cost-efficiency and strategic improvements in airline operations.

ScoreScape - Educational Data Visualization Platform UC Berkeley, CA **Oct 2023 – Dec 2023**

- Developed ScoreScape, a web platform for visualizing educational data including budgets, enrollments, and student performance.
- Utilized U.S. Census Bureau and NAEP data to provide an in-depth view of student achievement in U.S. elementary and secondary schools.
- Created interactive tools for easy understanding of educational spending, student demographics, and outcomes.
- Enabled educators and policymakers to make data-driven decisions by providing clear, actionable insights.
- Conducted user experience studies with six participants to enhance the website's design and functionality.
- Refined the web interface based on user feedback for a more intuitive and efficient user experience.

Bird Song Classification Using Neural Networks and Machine Learning UC Berkeley, CA **July 2023 – August 2023**

- Spearheaded the use of BirdCLEF 2023 Kaggle data for bird species classification and biodiversity monitoring.
- Employed audio augmentation to enhance model generalization and extract key features like MFCC, chroma etc for bird vocalizations.
- Explored machine learning models like logistic regression, random Forest, neural Networks, CNN, LSTM, GRU RNN and more.
- Achieved 95% training and 87% testing accuracy using GRU RNN with evaluation based on F1-score metrics.

Revolutionizing Acmet Gourmet Meal (AGM) Delivery with NoSQL Data Magic UC Berkeley, CA **July 2023 – August 2023**

- Led a transformative project at AGM, integrating NoSQL databases for innovative meal delivery solutions.
- Architected Neo4j, MongoDB, and Redis databases to support revolutionary meal delivery strategies.
- Utilized graph algorithms (page rank, community detection and closeness centrality) for optimizing BART delivery networks.
- Implemented customer recommendation systems with personalized route suggestions.

Big Budgets? Big Returns? - An Analysis of Film Industry UC Berkeley, CA **April 2023 – April 2023**

- Analyzed The Movie Database (TMDB) movie data for budget-revenue correlations and built regression models on a 30% subsample.
- Demonstrated proficiency in validating assumptions of large samples and classic linear models.
- Led the team and developed regression models to analyze movie revenue with different covariates like movie run time and vote count.
- Identified the best model based on adjusted R^2 and practical significance, showing potential for a 77.2% increase of revenue.

Work Experience

Software Engineer Walmart eCommerce, Sunnyvale, CA **January 2019–January 2023**

- Designed data-driven solutions using big data and streaming technologies to enhance the Walmart store ecosystem.
- Developed and executed complex SQL queries to uncover core infrastructure insights and correlate data.
- Collaborated with the infrastructure team to predict store networking equipment anomalies and built a scalable portal for 20K users.
- Designed microservices for store infrastructure incident resolution and utilized AIOps to detect and diagnose issues, improving MTTR.

Devops Fellow Engineer Aeris Communications,San Jose, CA **October 2018–December 2018**

- Designed and implemented tools for automating the deployment of IOT applications.
- Created automation to handle disk and memory log errors from Nagios and ELK stack.
- Analyzed server log messages and developed dashboard on Kibana.

Software Engineering Intern Konviv Inc, Berkeley, CA **May 2018–August 2018**

- Developed an AI-based financial management chatbot through K-Means clustering for customer transaction categorization.
- Worked on Bayesian network based recommendation engine to guide the customers for better financial decisions.

Deep Learning Research Assistant San Jose State University, CA **May 2017–August 2018**

- Contributed to UAV graffiti removal system development in San Jose, achieving 90% graffiti detection accuracy with SSD Mobilenet.
- Employed inception model to differentiate graffiti and non-graffiti images for drone classification.

Software Engineer Larsen & Infotech, India **July 2014–June 2016**

- Developed COBOL modules and SQL queries for online travel insurance and grew customer base by 80,000.
- Rectified the production defects and played a major role in improving the latency of the screen designs.

Leadership and Community Engagement

Ambassador at Women In Data Science (WIDS) **Jan 2024–present**

Awards

Employee Of The Month Award (June 2022): Awarded the best employee of the month for submitting a paper on "Proactive Incident Management leveraging AIOPS techniques" at the internal Walmart conference.
